

Ground Africa is a engineering consultancy specialising in the discipline of Geotechnical Engineering.

Our geotechnical consulting services include:

- Geotechnical Investigations & Ground Testing
- Finite Element Analysis & Ground Modelling
- Lateral Support & Excavation Design
- Foundation Assessment & Design
- Pile Design
- Rock Mass & Slope Stability Analysis
- Bearing Capacity & Settlement Assessment
- Earthworks & Fill Compaction Verification
- Road Centre-line Investigations
- Pavement & Construction Material Assessments
- Seepage Analysis
- Landfill Geometric Design
- NHBRC Site Classifications

At present Ground Africa Consulting is primarily committed to the South African construction industry. We have up-to-date and relevant experience in both local and international ground conditions and can facilitate engineering practitioners in most sizeable projects.

Ground Africa Consulting is an independent enterprise focused solely on geotechnical engineering. Our objective is to provide our clients with quality work and a high standard of professionalism, while delivering projects within reasonable timeframes.
